

The Mountain Outfitters

Introduction

This project is the beginnings of a large website that allows users to purchase ski/mountain bike lift tickets, rent equipment packages and purchase equipment and apparel/accessories from a fictional mountain resort store.

Design and Implementation

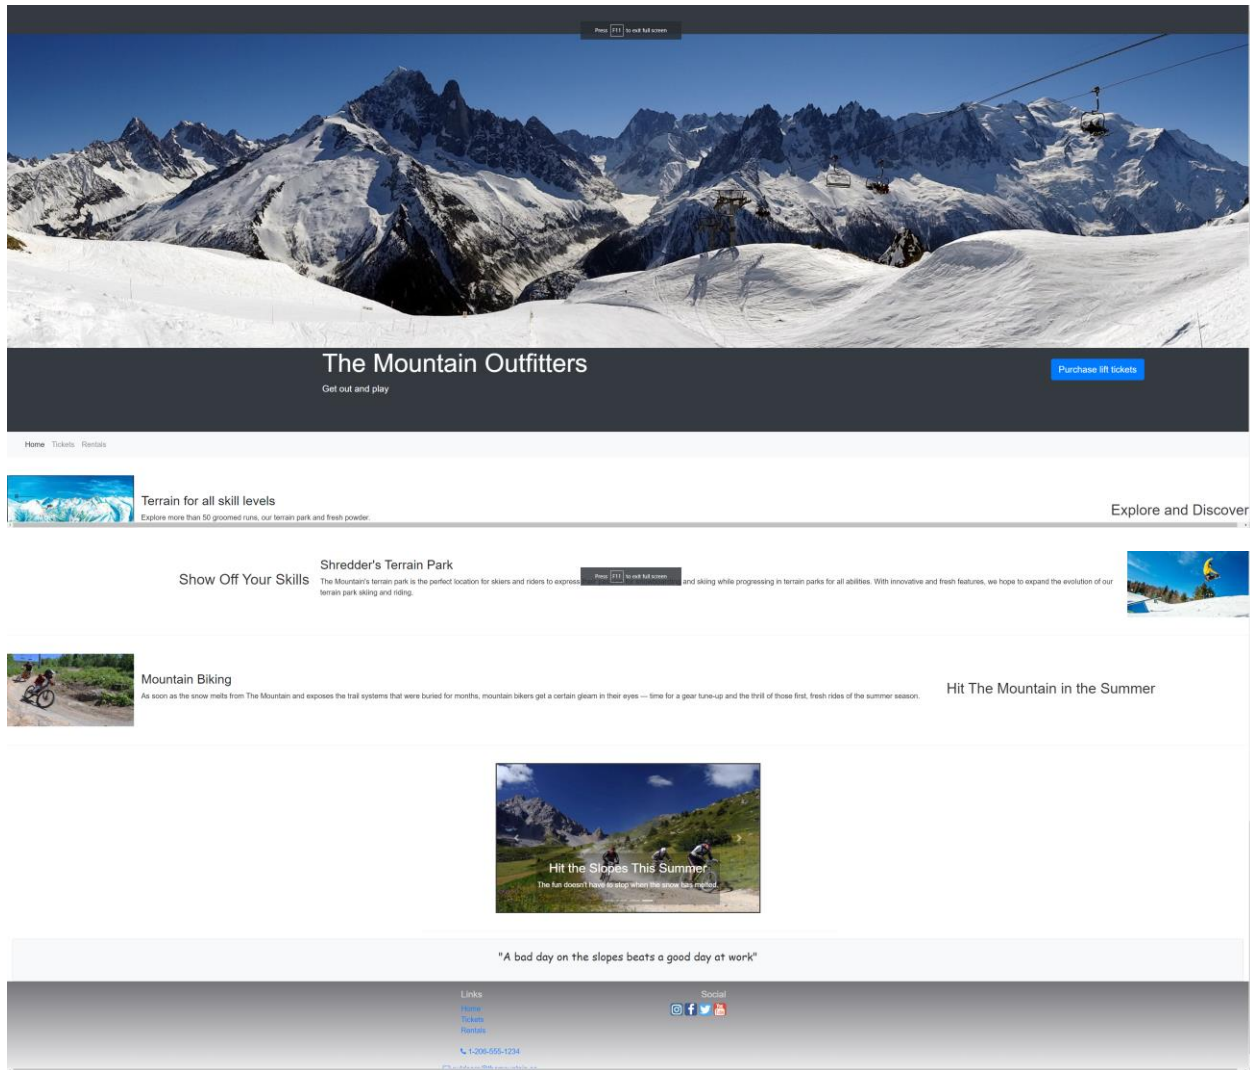

Key Features:

- Simple and clean design that is easy to read and pleasing to the eye
- I utilized many of the Bootstrap elements that were used in the Nucampsites project
- A carousel that showcases several key features of the mountain resort
- Several cards displaying pricing and quotes
- A jumbotron displaying a responsive panoramic photo
- Several Bootstrap icons, including social media, envelope and telephone icons
- A reservation modal with bootstrap number input spinners, a select dropdown and a calendar, with buttons styled using Bootstrap
- A responsive navbar
- A reservation form

Conclusions

- The biggest takeaway from this project from me, is that I bit off more than I could chew in a relatively short amount of time, given my current skill level
- I spent a lot of time on relatively minor details. I am a perfectionist and want my finished product to actually be finished
- I was able to figure out a couple of problems by listening to/collaborating with other students that I wasn't able to answer satisfactorily in my Google searches
